CU*Answers Network Services is excited to introduce a no-hassle, time-saving way to get GOLD updates to your credit union:

The GOLD update appliance or
GUAPPLE

The GUAPPLE is designed to act as a stand-alone, hands-free network appliance. Because this is an appliance based on a secure, hardened platform, **no longer do you have to worry about antivirus software, spyware removal, or Windows-specific problems** affecting the GOLD-Master.

The GUAPPLE will eliminate the need to manually download and extract updates. **It works even when you're not there, constantly monitoring CU*Answers for the latest GOLD release and making it available to your workstations.** You will need to do nothing more than rename the current GOLD-Master (we will assist for no charge) and provide power and an Ethernet connection to the GUAPPLE.

Like a GOLD-Master, you will need one GUAPPLE at each location. Other than an initial cost for the unit itself and a low monthly maintenance fee, there are no other charges . . . ever. Because the GUAPPLE is completely managed and maintained by CU*Answers Network Services, you can focus on your credit union business.

Cost: $589 per unit plus $29* per month, per unit.

CU*ANSWERS
Network Services

*The monthly recurring charges cover hardware replacement, software maintenance, full monitoring, and remote appliance management.
