

Unified Threat Management SOLUTIONS

FOR YOUR
BUSINESS

Managed Security Services Unified Threat Management

Your network is always under attack and those attacks are constantly evolving. Traditional firewalls are not able to adjust to the rapidly shifting threat profiles of today's sophisticated attackers. Protecting today's networks demands a new approach. WESCO Net's Unified Threat Management Solution is a robust and agile network security package engineered to deliver the utmost protection for your network while eliminating high cost and complexity.

WESCO Net's Unified Threat Management Solution layers integrated wire speed Deep Packet Inspection technology with integrated network intrusion prevention and detection. Network layer anti-virus strips malicious content at the Internet gateway and secure offsite log retention and analysis technologies ensures ongoing audit compliance and peace of mind.

"I don't worry about the safety of my data now that I have WESCO Net."

Unified Threat Management

No Hassle Comprehensive Network Security

Comprehensive Integrated Network Security Against Advanced and Evolving Threats

WESCO Net's Unified Threat Management Solution [UTMS] is a complete Internet gateway security solution combining wire speed Deep Packet Inspection Technology to block unauthorized traffic, integrated intrusion prevention and detection to strip out and alert administrators of malicious traffic trying to enter your network, sophisticated gateway anti-virus to remove viruses before reaching internal PCs and servers, and integrated anti-spyware to cleanse Internet traffic of spyware and malware that can do damage to PCs or cause them to bog down unnecessarily.

Unlimited Policy Changes and Technical Assistance

WESCO Net's UTMS services include unlimited technical support and policy changes for your managed network security systems. No need to worry about the clock running when changes are necessary. We'll also assist with your audits and work directly with your auditors to ensure you pass with flying colors.

24x7x365 Monitoring with Secure Offsite Log Storage

Security events are logged to our secure monitoring systems in our SAS 70 approved data centers and reviewed by security and compliance experts. Summary reports are available on demand to meet your reporting and audit compliance requirements.

VPN Management

VPNs allow secure connections with remote offices and business partners using the Internet to eliminate costly dedicated leased lines. Included with UTMS is unlimited VPN management support.

Complete Hardware Warranty and Replacement

No need to worry about hardware maintenance and support. You are completely covered with WESCO Net's UTMS including hardware replacement, firmware upgrades, and unlimited support.

Automatic Configuration Control and Backup

You are ready for the unexpected: your UTMS is automatically backed up to our secure management systems in our SAS 70 approved data centers.

Scheduled and On-Demand Reporting

Full traffic analysis and threat reporting is at your fingertips should you be interested or need to satisfy audit compliance requirements.
