

# Data Analysis and Warehousing

## Developing a Vision: AI\*ENGAGED

### THE DATA WAREHOUSE IS GROWING UP

Today's Data Warehouse is a unique credit union-managed solution in CU\*BASE that opens up data storage for analysis – A dedicated place for general storage, long-term archives, and optional premium analysis data.

**Storage was Yesterday's Sole Focus** – The capability for custom and premium data storage opens the door to new analysis projects.

### A VISION FOR THE FUTURE – AI\*ENGAGED

Grow into a new, separate, software package that will serve analysts and business intelligence people with a special data workspace for analysis – Expand further than the simple storage unit and baseline analysis tools, building a full package of data storage *plus* new premium data, premium tools, and more control.

**A Workspace is Tomorrow's Target** – *Coming Soon* – A specialized suite of tools and data an analyst will use to execute and share their analytical work, *including* the Data Warehouse as we know and love it today.
