

AUTOMATE A DATA FEED

Automate the extraction of data tables from the core processing environment with *daily* transfers sent for use in your external data warehouse.

CUSTOM DEX – Data EXchange

FOR EXTERNAL DATA WAREHOUSES

Every credit union already has direct access to member and processing data inside the core, but anyone with an external data warehouse already in play (or considering one) knows that ETL – extract, transform, and load – can be a chore.

DEX provides a solution for automating these processes and operates with daily updates to the data set in your warehouse.

GET IT STARTED

You'll work with the Asterisk Intelligence and CU*Answers Programming teams to launch your custom DEX. First, decide which package your credit union will need (more details to the right).

Pricing for either option maintains a very simple monthly fee covering the daily data transfer.

Standard Package	Custom Package
\$2500 one-time setup \$100/month	Custom Quote for set-up \$100/month

When you're ready to begin, place your order online via the Asterisk Intelligence page of the CU*Answers store.

A SOLUTION FOR EVERYONE

Choose from one of two levels for a solution that works best for your warehouse!

STANDARD PACKAGE – Just Starting Out

The standard DEX package includes a carefully selected pre-defined list of database tables which capture the most important member and account information. The standard package includes 50 tables and the data transfers can typically be launched quicker than a custom package.

This is the recommended starting point for anyone either just beginning to manage an external data warehouse, looking for a lower cost solution, or only extracting a small amount of data and ready to expand.

CUSTOM PACKAGE – More Data, More Options!

For a custom flavor to your automatic data feed, consider the custom package. With this option you can choose more or less, or simply swap tables to make sure you're getting the ones which mean the most for your data strategies.

Contact the Asterisk Intelligence team at CU*Answers for more information on our products supporting credit union data analytics and data warehouse solutions!
