IN-PERSON BOOT CAMP TRAINING SCHEDULED EACH SPRING & FALL

The CU*Answers Network Services (CNS) Boot Camp is a two-day course designed to cover the primary tools and technologies necessary for supporting CU*BASE/CBX core processing at the credit union.

The range of topics discussed include a high-level overview of the architecture and security, tips and tools for daily management of the IT network, as well as remediation techniques for troubleshooting and resolving issues before contacting the help desk for escalation.

Our overall goal is a tighter integration between credit union IT staff and the CNS team.
